

## DAAD GSSP 2019

### Project 2

#### Control of Behaviour in Shared Spaces

Supervisor: [Prof. Dr. Monika Sester](#)

In order to enhance and improve the usage of Shared Spaces in dense traffic situations, dedicated lanes or areas for different traffic groups are beneficial. These areas shall, however, not be installed physically, but virtually by visual communication. The idea of this project is to design and evaluate different modalities of visual communication, e.g. by employing projections or individual visualizations on AR-glasses or smartphones.
